

February 2005 - SEL purchase new SMT line

Spur Electron has invested over £80,000 extending existing SMT facility. New equipment purchased includes a Dima Screen Printer (HS100) and a Dima Automatic SMT placement machine (HP100). Both machines have been chosen for their accuracy and will be used for both Defence and Aerospace work in addition to plans to investigate automatic placement possibilities for the European & Worldwide Space Industry.

This investment has been made possible through the continued support of The Spur Group (Spur Electron's Parent Company) and follows large investments in both the cleanroom and laboratory over the last few years.

This equipment will allow Spur to be at the forefront of assembly process development within the Space Industry. Enabling Spur to move with the times and stay one step ahead of our competitors.
