

May 2008 - New Spur Laboratory apprentice

Kelly Miller joined SEL in conjunction with the PETA Modern Apprenticeship Scheme as an apprentice within Spur's Laboratory Department.

Spur Electron Ltd is proud of its continued commitment to the modern apprenticeship scheme. This scheme offers on-the-job training in our laboratory and engineering departments and day releases to a local college to assist in working towards a nationally recognised qualification.

Four years ago SEL adopted their first apprentice, Mike Stamp, who has since completed his Advanced Modern Apprenticeship and also achieved NVQ 2, 3 and ONC Electrical/Electronic Engineering. Mike has recently been promoted to Junior Engineer and is currently pursuing a HNC Qualification in Electrical/Electronic Engineering with day releases to attend a local University.

Through the apprentice scheme Spur Electron Ltd give opportunities to young people whilst producing a highly skilled and educated workforce.

Spur Electron has plans to continue the apprenticeship scheme within the Laboratory due to its success and is currently planning to recruit the next apprentice in the 2nd Quarter of 2009 through the PETA Scheme.

Spur has also developed in-house training courses within the Cleanroom and SMT Areas to enhance technician skills and development from IPC assembly levels to ESA assembly levels.
